Rebucas, Renxelle Dave

PURPOSE

Hospitals and clinics often experience difficulties in managing patient records, appointments, ward assignments, and treatment information using manual or outdated systems. These issues may lead to delayed transactions, data inconsistency, and inefficient hospital operations.

The Hospital/WellMeadows Information System was developed to provide a centralized and organized platform for managing hospital processes. The system helps improve patient record management, appointment scheduling, ward and bed allocation, and treatment monitoring through a web-based Laravel application integrated with a database system.

Target Users and Intended Use of the System

The Hospital/WellMeadows Information System is designed for hospital personnel manage daily patient and administrative operations.

Target Users:

- Administrator — manages users, monitors system operations, and maintains records.**
- Charge Nurse — handles patient monitoring, ward assignments, and treatment-related information.**
- Receptionist — manages patient registration, appointments, and admission processes**

The system is intended to improve hospital workflow by providing faster access to patient information, organized record management, efficient appointment scheduling, and proper ward and bed allocation through a centralized web-based platform.

System Features and Modules

The Hospital/WellMeadows Information System consists of different modules designed to improve hospital management and patient services.

1. Patient Management Module

- Register and update patient information
- Maintain patient medical records
- Track Patient Admission and discharge details

2. Staff Management Module

- Manage staff records
- Maintain staff schedules and rules
- Assign staffs to department and wards

3. Ward and Bed Management Module

- Add ward Manage ward information
- Assign and monitor bed availability

4. Appointment and Treatment Module

- Schedule appointments
- Record diagnosis and treatment details

System Features and Modules

Billing Module

- Manage patient billing and payment transactions

User Roles:

- Administrator
- Charge Nurse
- Receptionist

Technologies Used

The Hospital/WellMeadows Information System was developed using different web development technologies and tools to ensure functionality, responsiveness, and efficient database management.

Front-End Technologies

- HTML
- CSS
- JavaScript
- Bootstrap

Back-End Technologies

- PHP
- Laravel Framework

Database

- PostgreSQL

Development Tools

- Visual Studio Code
- GitHub
- pgAdmin4
